

Sounding ASE Roles

How software engineering roles
change in the future

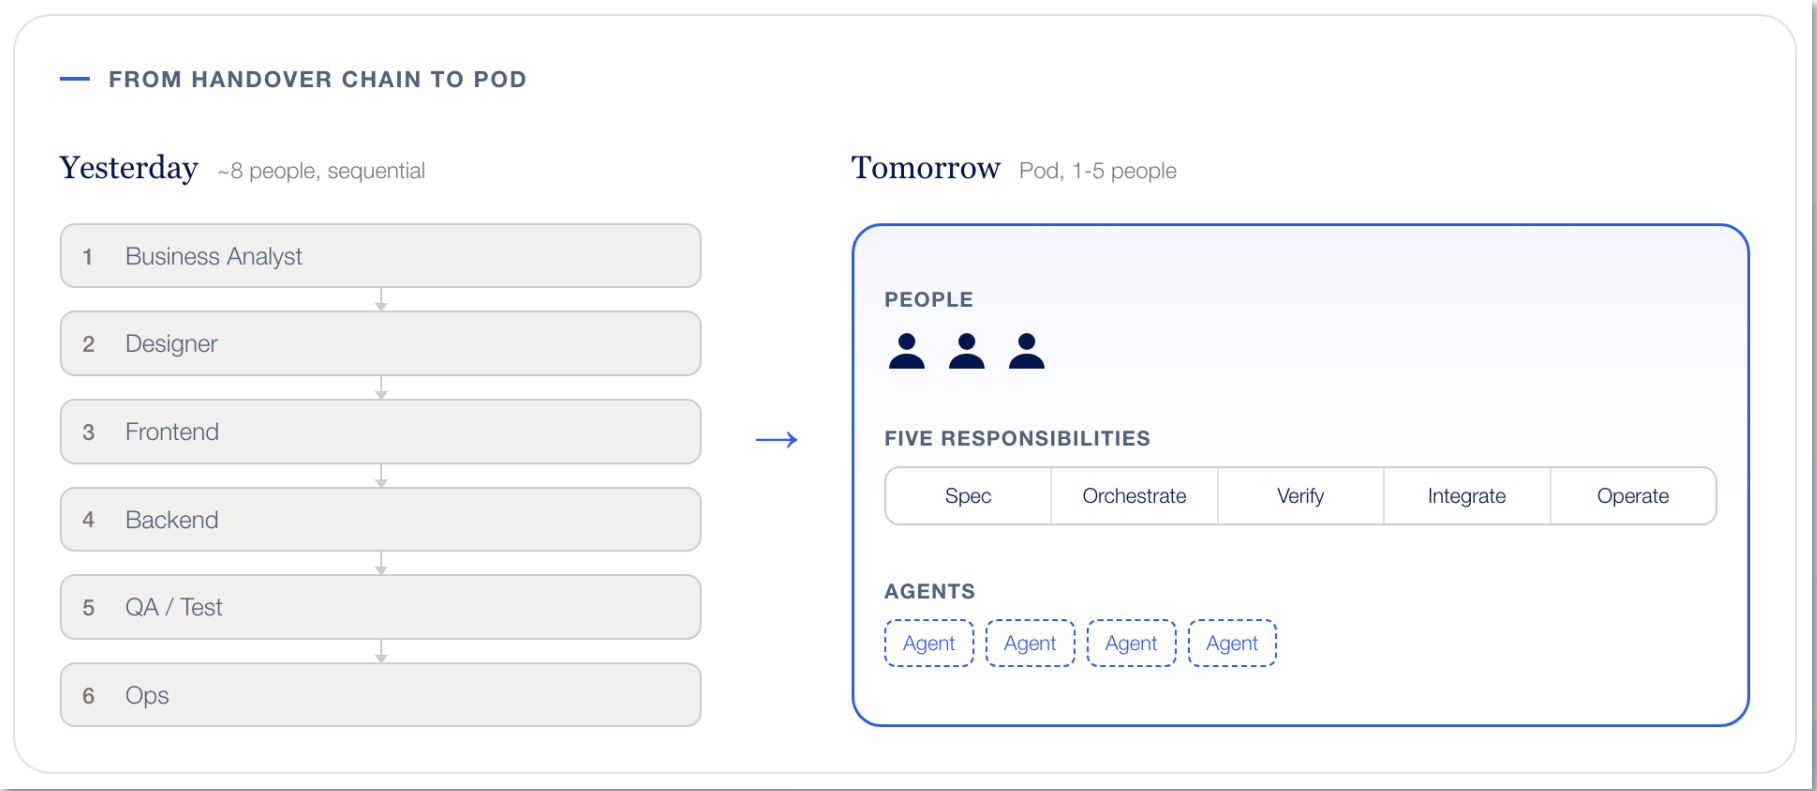

18.08.2026

ASE

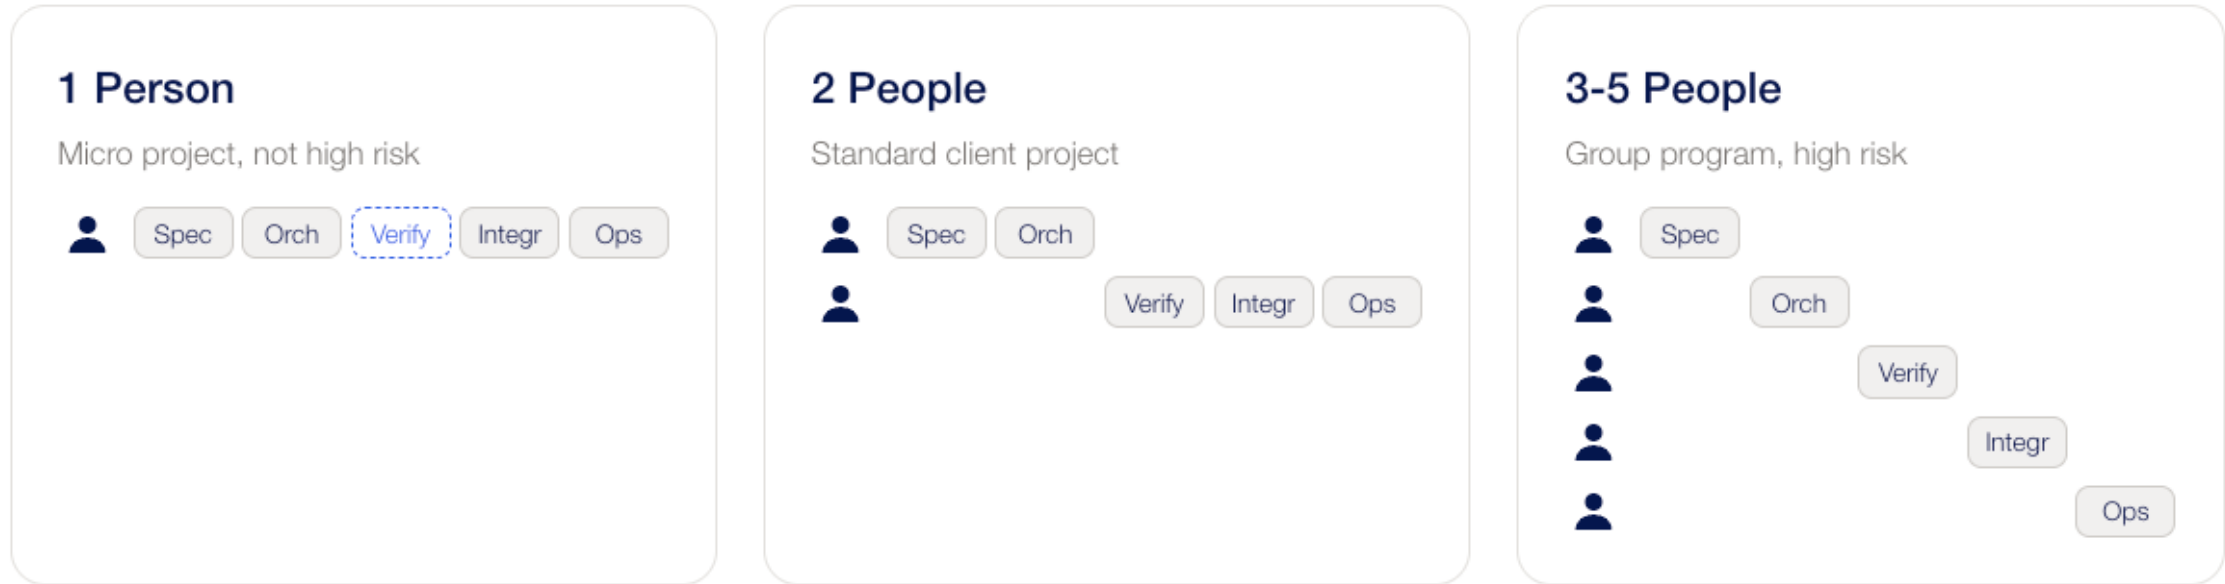

Agentic Software Engineering

Agents take over execution, the engineer shifts to specify, steer and verify

This shift is why artifacts iterate in minutes instead of weeks, responsibilities run in parallel, and nobody waits in a queue.

Size of pods depends on project and client type - 1 person setup utilizes bench for verification

Future: **Person stays on the loop**, not in every step: they build the harness and intervene on flags. The domain load does not shrink. The smaller team still has to understand business rules and/or compliance requirement.

Five core roles carry delivery end-to-end

Spec Owner

Translates client intent into testable specs

Agent Orchestrator

Builds by steering agents, build and AX track (design)

Verification Lead

Independent sign-off, four-eyes principle

Integration Engineer

Anchors delivery in SAP, LeanIX, and group landscape

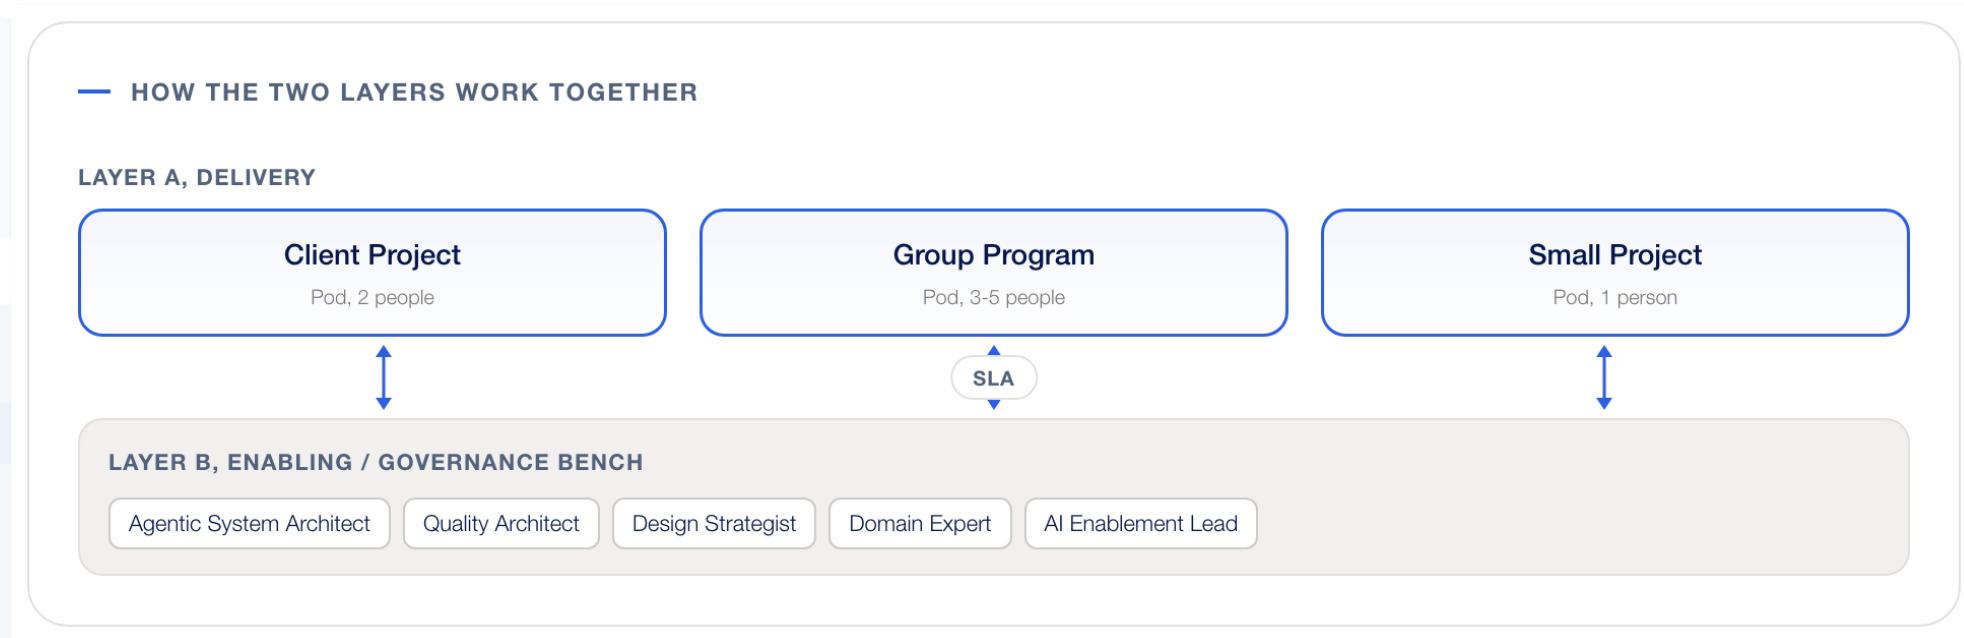

Operations & Reliability Lead

Run, maintain, reliability

Team size defined by complexity: 1-5 people per pod. Final verify sign-off never comes from the builder's hand.

A shared bench flanks the pods with standards, quality and governance

- **Agentic System Architect** - system steward across pods
- **Quality Architect** - trust register, AI FinOps, EU AI Act Art. 4
- **Design Strategist** - brand and AX standards
- **Domain Expert** - domain and regulatory authority
- **AI Enablement Lead** - reskilling and adoption

The bench serves all pods, deliberately no architects inside the pod.

Currently: Sounding to management and start MyCompetence discussion

STATUS

- One aggregated key area “Agentic Software Engineering” spanning the five core roles
- Levels are pure seniority, junior to principal
- Handover to the MyCompetence product owner in CW34-35

IN ALIGNMENT

- Works-council process: the update of all roles runs via the council
- Continues refinement of core- and bench-roles under „ASE“-role

Does this role picture fit? What is missing from your perspective?
